

# MYnCoin Migration Whitepaper

## 1. Introduction

MYnCryptoCoin (MYN) is the liquidity and governance utility token of the MY™ Brand ecosystem, serving as the digital gateway to its proprietary services and decentralized asset-backed platforms.

## 2. Migration Overview

MYnCoin migrated to a capped, auditable token standard on BNB Smart Chain. The token contract is now locked, immutable, and verified on-chain.

## 3. Supply & Liquidity

A total supply of 17,888,777 MYN is set, with limited public float and phased liquidity injections governed by time-locked smart contracts.

## 4. Governance Alignment

All liquidity and reserve changes align with the Certified MYN Liquidity Governance Policy. Modifications must be voted or pre-documented by MY™ Council.

## 5. Brand Integration

MYnCoin will fuel MY™ Bank, MY™ Vault, MY™ Real Estate, and MY™ Wellness—allowing native utility and redemption mechanics in-app.

## 6. Compliance & Audit

MYnCoin embeds verifiable proof-of-audit receipts, token burn logs, and a dedicated compliance repository for regulators and exchanges.

## 7. Conclusion

The migration enhances transparency, governance, and utility across all MY™ platforms while preserving ethical decentralization.
